DISASSEMBLY FOR REPAIR

1. Remove 6 screws from the metallic cabinet and lift the metallic cabinet straight upward (1, 2).

(Note) Be aware that the metallic cabinet is hooked to the projections on the panel.

2. Remove 3 screws at the bottom of the panel (3).
3. Push the pawls at both sides of the panel and pull the panel frontward (4, 5).

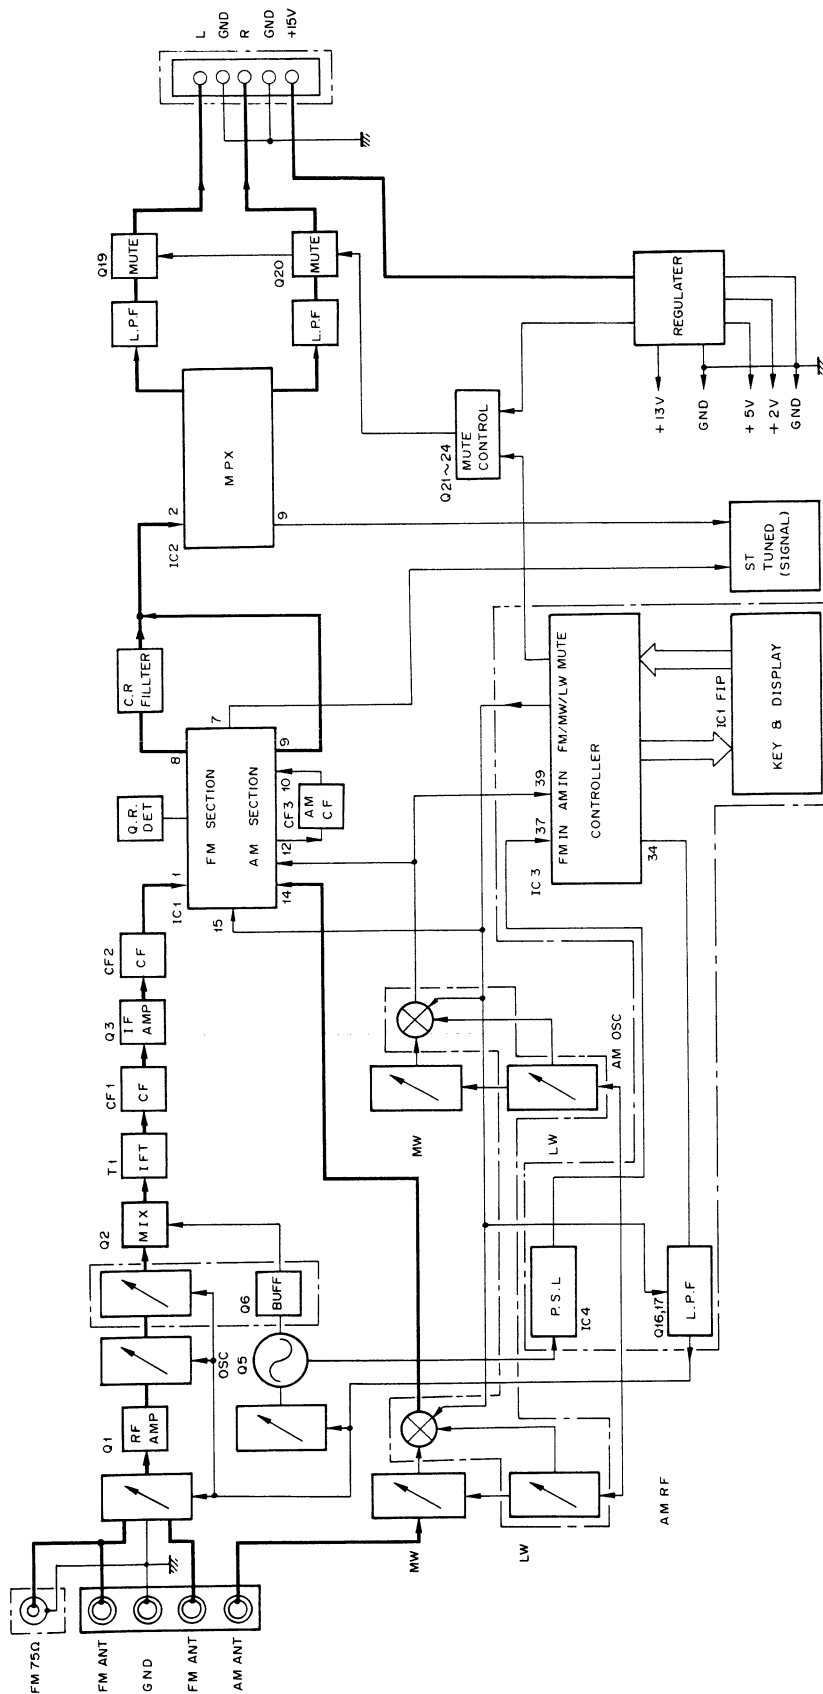

4. To remove the pc board from the rear side of the panel, release the hooks from the pc boards and pull the pc boards straight backwards (6, 7).

5. For removal of tuner pc board, first unsolder the lead to the screw (8).
6. Release the pc board from the pc support and remove 1 screw on the pc board (9, 10).
7. Remove 3 screws from the antenna terminal board (11) and remove 1 screw from the connector (12).
8. Slide the pc board out as shown (13).

BLOCK DIAGRAM

CIRCUIT DESCRIPTION

Tuner unit (X05-2870-10 and X05-2880-10)

Components	Functions	Operations
IC1	FM/AM system IC	FM IF amp/detect/control, AM mix/IF amp/detect
IC2	MPX	MPX demodulation
IC3	DTS controller	Controls the PLL synthesizer, display, etc.
IC4	FM OSC divider	Divides the FM OSC to 1/30 or 1/32.
Q1	FM RF amp	
Q2	FM MIX	
Q3	FM IF amp	
Q4	FM OSC buffer	
Q5	FM OSC	
Q6	FM OSC buffer	
Q7	Switch	ON in FM mode to adjust the FM signal level
Q8	Switch	ON in FM to set the IC to FM mode.
Q9	Switch (MW/LW switching)	ON in MW to operate MW OSC.
Q10	Switch (MW/LW switching)	ON in MW to select the MW RF signal.
Q11	Switch (MW/LW switching)	ON in LW to select the LW RF signal.
Q12	Switch (MW/LW switching)	ON in LW to operate LW OSC.
Q13	AM OSC amp	Amplifies the AM OSC signal to supply it to DTS.
Q14	Inversion amp	Turns ON in LW to turn OFF Q15.
Q15	Switch (FM, MW — LW switching)	ON in FM and MW, OFF in LW so that the response of DC amp is switched.
Q16, Q17	PLL DC amp	The darlington connection of Q16 and Q17 forms a high input impedance, high-gain amplifier.
Q18	Composite buffer amp	Turns the composite signal line to low impedance.
Q19, Q20	Muting	ON when muting.
Q21	Power mute drive	Turn ON when Q33 turns OFF, and becomes the muting drive source.
Q22	Muting logic composition	Synthesizes the power mute and DTS mute signals.
Q23, Q24	Mute drive	Drive Q19 and Q20.
Q25, Q26	Switch (AM/FM display switching)	Turn ON in AM modes to supply power for the kHz/MW/LM indicator circuit.
Q27	LW display driver	Turns OFF in LW so that "LW" is displayed using high voltage of the collector.
Q28	MW display driver	Turns OFF in MW so that "MW" is displayed using high voltage at the collector.
Q29, Q30	50 kHz display driver	Drives the display of "50 kHz" when displaying the FM frequency.
Q31, Q32	Switch (FM display)	Turn ON in FM to display FM and MHz, and supplies power to the 50 kHz display circuit.
Q33	Grid controller, inhibit	Slow-ON fast-OFF circuit for preventing erroneous lighting of display tubes when switching power ON/OFF. The DTS inhibit signal is also generated by dividing the collector voltage.
Q34, Q35,	Regulated power	
Q36	Supply circuit	
Q37	5.6 V regulated power supply circuit	

CIRCUIT DESCRIPTION

Components	Functions	Operations
D1 — D3	RF tuning varactor diodes	
D4	OSC varactor diode	
D5A	MW RF tuning varactor diode	
D5B	MW OSC varactor diode	
D6A	LW RF tuning varactor diode	
D6B	LW OSC varactor diode	
D7	Switch (VCO killer)	Turns ON in MW to stop the operation of the PLL MPX VCO.
D8	Switch (VCO killer)	Turns ON in LW to stop the operation of the PLL MPX VCO.
D9	Protector	Prevents the reverse voltage damage between the base and emitter of Q21.
D10	Discharge circuit	When power is switched OFF, discharges C96 to turn Q21 ON immediately.
D11	Reverse current	Prevents the discharge of the DTS backup power source.
D13	Clamper	Clamps the Q33 collector voltage and specifies the DTS inhibit voltage.
D14	Reference voltage zener diode	6.2 V
D28	Clamper	Prevents damage to circuit due to high-voltage static electricity.

CIRCUIT DESCRIPTION

STATIC FM/AM (MW)/LW 3-BAND DIGITAL TUNING SYSTEM LSI

The TC9157AP is a system LSI comprising one chip of PLL circuit controller for PLL synthesizer type digital tuning system.

The TC9157AP is used as a 3-band tuner in South Africa and Europe. There are the following versions, based on different frequency display systems.

TC9157AP: Digital display by 7-segment display unit by adding TD6301AP.

Applied to South Africa, U.S.A. and Europe.
(FM/AM 2-band in U.S.A. and FM/MW/LW 3-band in South Africa and Europe)

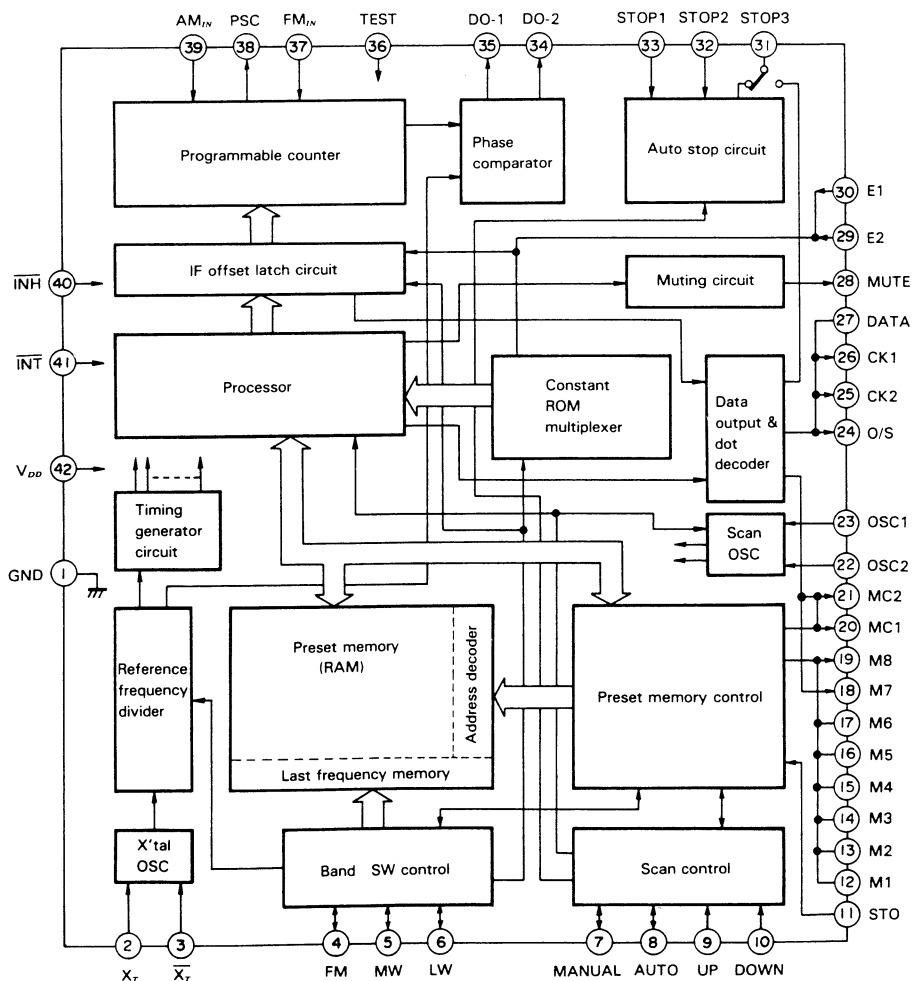

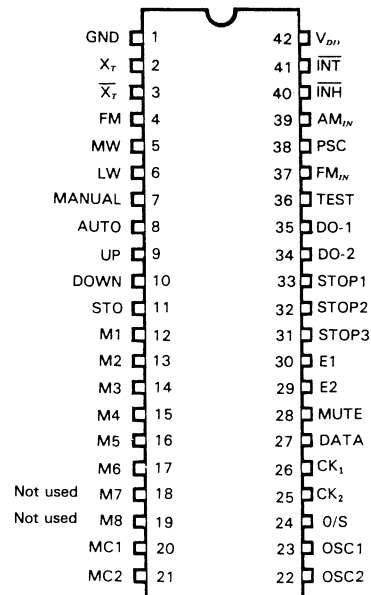

Operation keys, frequency display and operation display are static type.

Preset memory of 12 stations is contained. Last frequency memory and last channel memory of each band are also contained.

In FM mode, a swallow counter is formed in combination with the TD6104P prescaler, making the reference frequency 25 kHz.

TC9157P

Pin connection

CIRCUIT DESCRIPTION

Functions of Each Terminal (TC9157P)

* Make indicates Europe models.

Pin No.	Symbol	Name	Function	Remarks
2	X _T	Crystal oscillator	Connect crystal for reference frequency of 7.2 MHz	Feedback resistance contained
3	X _T			
4	FM	FM band selection input	Manual reset type. Switch FM, MW and *LW bands.	A
5	AM (MW)	MW band selection input		
*6	LW	LW band selection input		
7	MANUAL	Manual tuning mode selection input	Manual reset type. Switch manual mode at UP/DOWN channel selection.	A
8	AUTO	Auto search tuning mode selection input	Not used.	A
9	UP	UP control key input	UP/DOWN channel selection made by the push key.	B
10	DOWN	Down control key input		
11	STO	Memory store instruction input	With this input, preset memory is set to write condition.	A
12-17	M1-M6	Preset memory channel selection input	Control writing and reading of internal 12-channel preset memory in combination with MC1 and MC2 inputs.	A
20	MC1	Memory control input	Set 12-channel preset memory to random system of FM/AM (MW/LW).	C
21	MC2			
22	OSC2	AM oscillator terminal	Connect C and R of the oscillator to determine scan speed at AM search.	—
23	OSC1	FM oscillator terminal	Connect C and R of the oscillator to determine scan speed at FM search.	—
24	O/5	FM 50 kHz output	Output indicating 50 kHz and step in FM band in South Africa and Europe. "H" level at 50 kHz.	D
25	CK1	Receiving frequency data serial output	Output the serial data and timing clock to be sent to TD6301AP driver for digital display of receiving frequency.	D
26	CK2			
27	DATA			
28	MUTE	Muting signal output	"H" level when muting signal is output.	D
29	E2	Area selection input	Designate each area, U.S.A., Europe and South Africa.	E
30	E1			
31	STOP3	AM-IF signal input	Not used.	F
32	STOP2	Auto search stop signal input	Not used.	E
33	STOP1	Scan speed slow input		
34	DO-2	Phase comparator output	Two tri-state buffer outputs are output in parallel from one phase comparator.	G
35	DO-1			
36	TEST	Test terminal	Not connected.	B
37	FM _{IN}	FM programmable counter input	Output of TD6104P prescaler is connected.	F
38	PSC	Prescaler control output	Control frequency dividing of 1/30 and 1/32 of TD6104P prescaler.	D
39	AM _{IN} (MW _{IN})	AM (MW) programmable counter input	Enter AM (MW) station oscillating signal.	F
40	INH	Inhibit input	Normal operation at "H" level and inhibit at "L".	E
41	INT	Initialize input	Normal operation at "H" level and internal condition is initialized at "L".	E
42	V _{DD}	Power application terminal		
1	GND			

CIRCUIT DESCRIPTION

Input/output equivalent circuit

A. I/O type with built-in LED driver of bipolar transistor

B. C-MOS input with pull-down resistor

C. C-MOS I/O type

D. C-MOS output

E. C-MOS input (without pull-up/down resistor)

F. With built-in input amplifier

G. Tri-state output

H. LED driver output of Nch MOS

I. LED driver output of bipolar transistor

Channel select function

- 1) Manual tuning with UP/DOWN key
 - o 1 step/1 push step tuning
 - o Fast tuning by pressing key continuously
- 2) Preset tuning by reading memory

Preset memory and last frequency memory

- 1) 12-station preset memory is contained.
 - o 12-stations, regardless of the selected band FM or AM (MW/LW) can be preset at random.
- 2) Last frequency memory is provided for each band of FM/MW/LW.
 - o The last frequency memory is capable of storing preset memory channel number together with frequency data. (Last channel memory function)
- 3) All memories consist of static type C-MOS RAM.

Display function

- 1) All displays are static type.
- 2) LED driver is provided for displaying bands, MANUAL/AUTO modes and memory channels.
- 3) Receiving frequency is displayed in the digital system by connecting TD6301AP.

Inhibit function

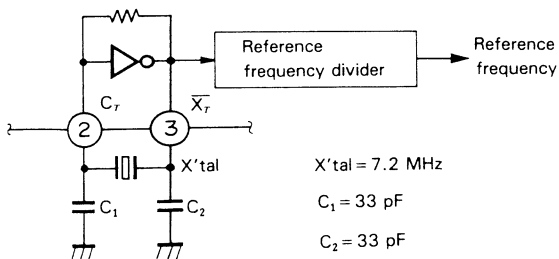

All input/output operations are inhibited by this function, and LSI operations including OSC oscillation are completely stopped. With this function, the receiving state including the memory contents is backed up for a long time by the capacitor when the power of the set is off.

CIRCUIT DESCRIPTION

PLL SECTION

Reference frequency and crystal oscillator

- Oscillation frequency of the crystal oscillator is divided to make reference frequencies of 9 kHz or 10 kHz for MW and 1 kHz for LW.
- Crystal oscillation frequency is 7.2 MHz.
- The crystal oscillator contains a self bias amplifier and consists of a crystal and a capacitor, as shown below. Oscillation is stopped in inhibit state.

Mode	Reference frequency	Remarks
FM	25 kHz	At FM band
MW 9	9 kHz	At separation of MW 9 kHz
MW 10	10 kHz	At separation of MW 10 kHz
LW	1 kHz	At LW band

Programmable counter

Programmable counter differs in the circuit configuration in FM and AM(MW/LW) modes.

1) FM programmable counter

In FM mode, the swallow count system is employed in combination with TD6104P prescaler. So, reference frequency is 25 kHz in this mode. Connection with prescaler is shown below.

2) AM programmable counter

Direct dividing system is employed in AM (MW/LW) mode. AM station signal is directly applied to AM_IN terminal.

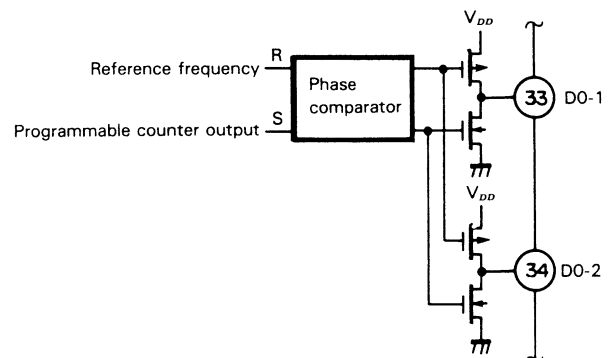

- Either FM_IN or AM_IN terminal contains an amplifier in the input circuit, and a signal is entered through capacitor coupling.
- PSC output level is low in inhibit state and in AM (MW/LW) mode.

Phase comparator

The phase comparator is the part used for comparing phases of the reference frequency and programmable counter output. It controls VCO through the low-pass filter so that frequencies and phases of these two signals coincide with each other.

- Two tri-state buffers DO-1 and DO-2 are output in parallel from one phase comparator. This permits use of two sets of low-pass filter without switching them.
- Both DO-1 and DO-2 are kept at low level in inhibit state.

4) DO output timing diagram

CIRCUIT DESCRIPTION

CONTROLLER

- Determining OSC1/OSC2 oscillation frequencies**
 OSC1 and OSC2 are C and R connection terminals for one-terminal type oscillator. Frequencies of these terminals are used to determine scan speed in manual fast tuning or auto search.
 OSC1 and OSC2 are used independently for FM and AM (MW) respectively. The OSC1 oscillation frequency is also used to determine continuous key pressing time for manual fast tuning, muting signal output time and automatic stored state reset time.
 Both OSC1 or OSC2 stops oscillation when not necessary.

$$\text{Oscillation frequency } f_{osc} \approx \frac{1}{0.7 C_x R_x} (\text{Hz})$$

$$f_{osc1} = 30 \text{ Hz (FM)}$$

$$f_{osc2} = 25 \text{ Hz (AM)}$$

(Note 1) $R_x = 56 \text{ k}\Omega$ (AM), $47 \text{ k}\Omega$ (FM)
 $C_x = 1.0 \mu\text{F}$ (AM, FM)

Scan speed (Fast tuning/Auto search)	At FM	$f_s (\text{FM}) = 1/2 \cdot f_{osc1} (\text{Step/sec})$	(Example) When $f_{osc} = 20 \text{ Hz}$	10 (step/sec)
	At AM (MW/LW)	$f_s (\text{AM}) = 1/2 \cdot f_{osc2} (\text{Step/sec})$		10 (step/sec)
Continuous key pressing time for manual fast forward		$T_{SCAN} = 14/f_{osc1} (\text{sec})$		0.7 (sec)
Automatic stored state reset time		$T_{STO} = 224/f_{osc2} (\text{sec})$		about 11 (sec)
Muting signal output time	short	$T_{MUTE} (S) = 7/f_{osc1} (\text{sec})$		0.36 (sec)
	long	$T_{MUTE} (L) = 15/f_{osc1} (\text{sec})$		0.75 (sec)

(Note) f_{osc1} : OSC1 oscillation frequency
 f_{osc2} : OSC2 oscillation frequency

E1	E2		Destination
0	0		South Africa
1	0		Europe
0	1	USA	MW 9 kHz separation
1	1		MW 10 kHz separation

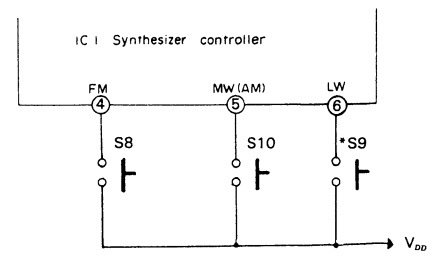

Selection of receiving bands

- Bands are switched by inputs of FM, MW and LW terminals. Three-band of FM/MW/LW in versions for South Africa and Europe, and two-band of FM/AM (MW) in versions for Canada and U.S.A.
- Inputs of FM, MW and LW are of the mutual reset type and "H" level active.
 - Input by multiple key depression is not accepted, and muting level becomes high.
 - LW input is not accepted in versions for Canada and U.S.A.

Designation of destinations, Canada, U.S.A., Europe and South Africa

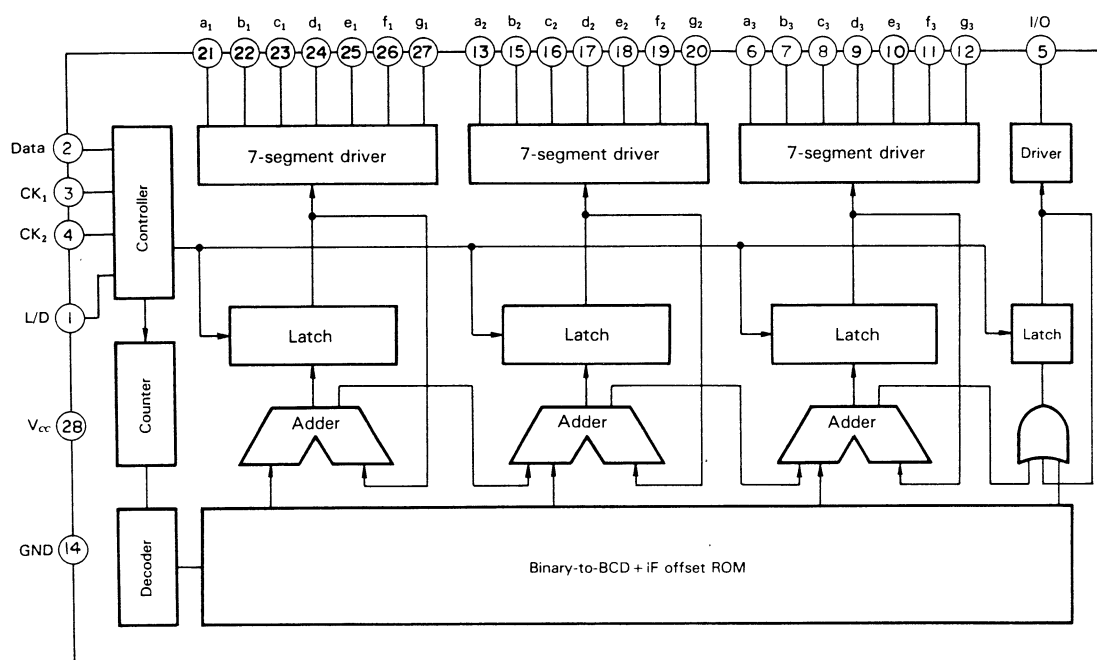

E1 and E2 terminals are used to designate the destination, Canada, U.S.A., Europe and South Africa.

- Designation of U.S.A. permits selection of 9 kHz/ 10 kHz separation of AM band.
- With $INH = "L"$ level, E1 and E2 inputs inhibit reading and hold the previous state.

CIRCUIT DESCRIPTION

Block diagram: TD6301AP (IC1; FIP driver)

Function of each connection

Pin No.	Name	Function
1	L/D	Output state switching input terminal. Switch the output state according to the display unit.
2	DATA	Receiving frequency data input terminal. The data is serially input by the system controller LSI.
3, 4	CK1, CK2	Receiving frequency data input control timing input terminal. Transferred simultaneously with the data by the system controller LSI.
5	I/O	Segment driver terminal. Display the 100 MHz digit at FM and 1000 kHz digit at AM.
6 — 12	a3 — g3	7-segment driver output terminal. Display the 10 MHz digit at FM and 100 kHz at AM.
13, 15 — 20	a2 — g2	7-segment driver output terminal. Display the 1 MHz digit at FM and 10 kHz digit at AM.
21 — 27	a1 — g1	7-segment driver output terminal. Display the 100 kHz digit at FM and 1 kHz digit at AM.
14	GND	GND terminal
28	V _{cc}	Supply voltage apply terminal

DC voltages are as measured with a high-impedance voltmeter during reception of the FM broadcast signal (with a signal strength of 60 dB at the ANT terminal). Values may vary slightly due to variations between individual instruments or/and units. Values in parentheses are as measured during reception of the AM broadcast signal (with a signal strength of 60 dB at the ANT terminal).

Les tensions c.c. doivent être mesurées avec un voltmètre à haute impédance pendant la réception d'un signal de programme FM (avec une force de signal de 60 dB à la borne ANT). Les valeurs peuvent différer légèrement du fait des variations inhérentes aux appareils et aux instruments de mesure individuels. Les valeurs entre parenthèses doivent être mesurées pendant la réception d'un signal de programme AM avec une force de signal de 60 dB à la borne ANT).

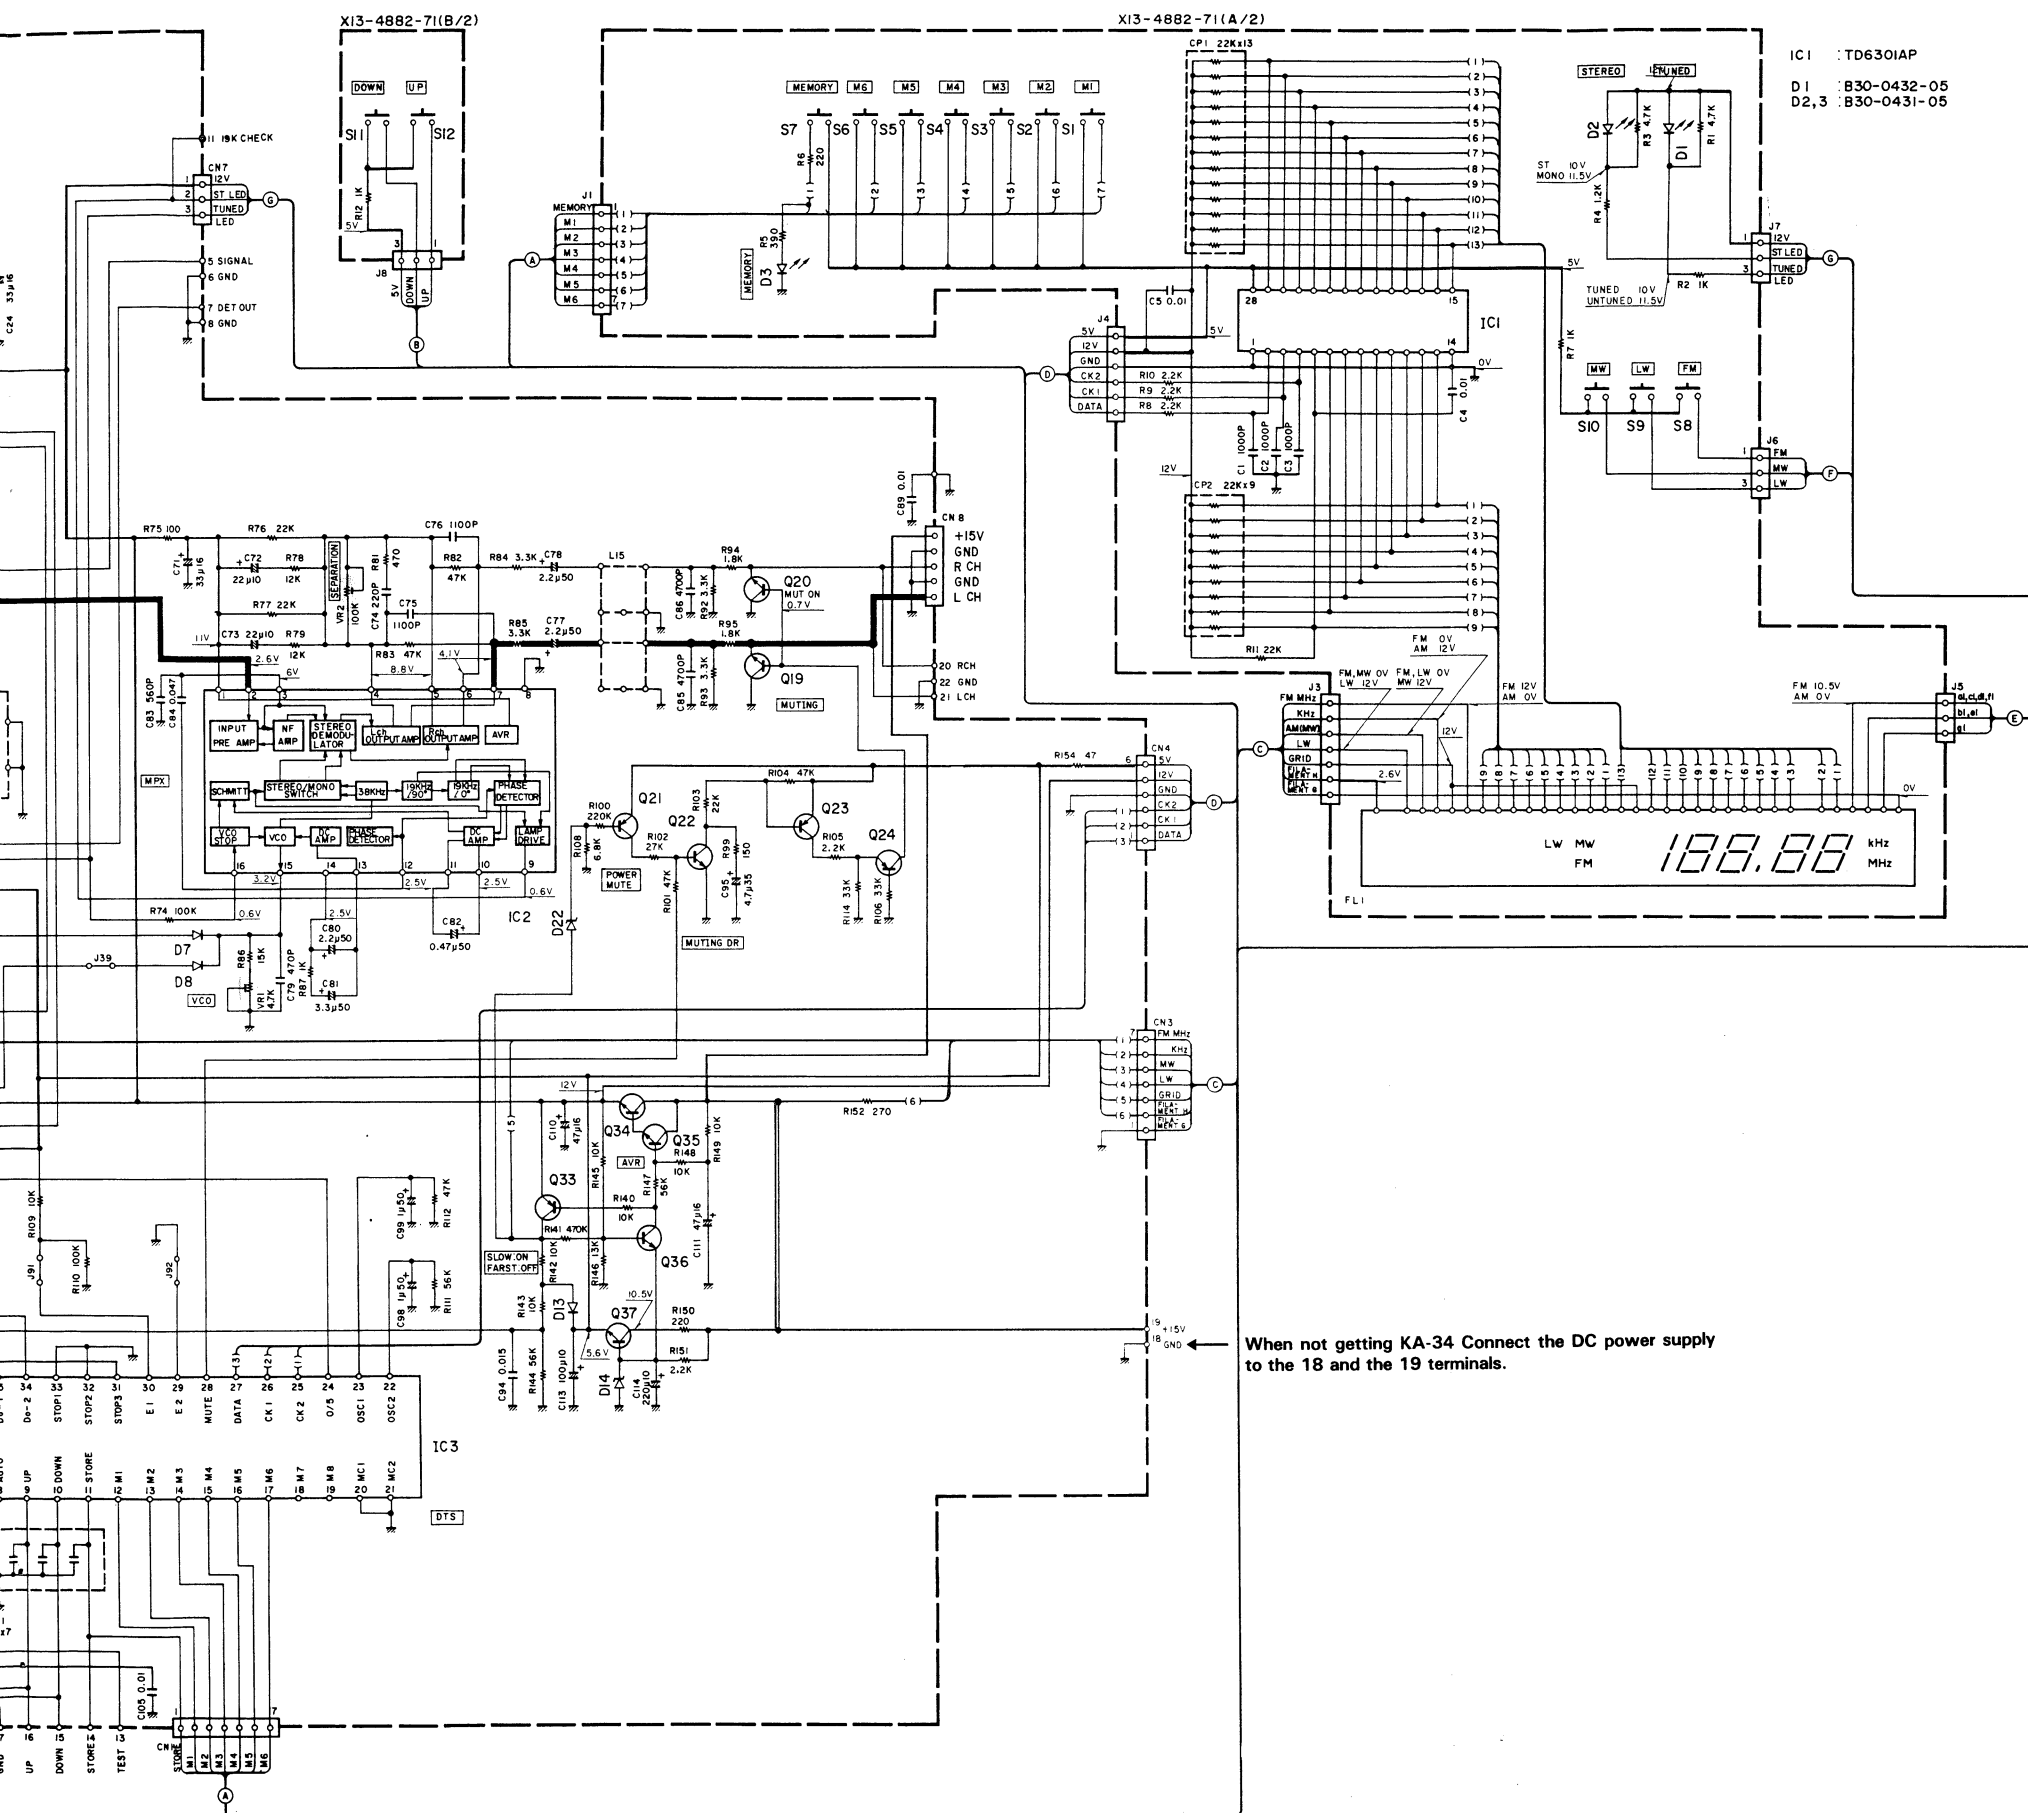

Die angegebenen Gleichspannungswerte wurden mit einem hochohmigen Spannungsmesser bei Empfang eines UKW-Signals (mit einer Feldstärke von 60 dB am Antennenanschluß) gemessen. Dabei schwanken die Meßwerte aufgrund von Unterschieden zwischen einzelnen Instrumenten oder Geräten u.U. geringfügig. Die eingeklammerten Gleichspannungswerte wurden bei Empfang eines MW-Signals (mit einer Feldstärke von 60 dB am Antennenanschluß) gemessen.

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list).  Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

SPECIFICATIONS

KT-34

[FM tuner section]

Usable sensitivity	10.8 dBf (0.95 μ V)
50dB quieting sensitivity	
Mono	14.5 dBf (3 μ V)
Stereo	37.2 dBf (40 μ V)
Signal to noise ratio	
Mono	70 dB at 65 dBf, 70 dB at 85 dBf
Stereo	64 dB at 65 dBf, 64 dB at 85 dBf
Total harmonic distortion	
Mono: 100 Hz	0.3%
1 kHz	0.3%
50 Hz ~ 10 kHz	0.6%
Stereo: 100 Hz	0.4%
1 kHz	0.4%
50 Hz ~ 10 kHz	0.9%
Capture ratio	2.0 dB
Alternate channel selectivity	50 dB
Stereo separation	
1 kHz	45 dB
50 Hz ~ 10 kHz	35 dB
Frequency response	30 Hz to 15 kHz +0.5 dB, -2.5 dB
Spurious rejection ratio	75 dB
Image rejection ratio	40 dB
IF rejection ratio	90 dB
AM suppression ratio	55 dB
Subcarrier suppression ratio	35 dB
FM frequency range	87.5 MHz to 108 MHz

[AM tuner section]

Usable sensitivity	20 μ V, 400 μ V/m
Signal to noise ratio	50 dB
Total harmonic distortion	0.6%
Image rejection	35 dB
Selectivity	25 dB
IF rejection ratio	50 dB

[General]

Dimensions	W: 420 mm (16-9/16") H: 63 mm (2-1/2") D: 227 mm (8-15/16")
Weight (Net)	1.5 kg (3.3 lb)
